

Ex.No:8

Implement data binding using Angular 2

Date: 27/9/23

Aim:-

To implement data binding using angular 2

Procedure:-

1. Create component

One way binding

interpolation

component.ts

import from @angular/core;

@component({

{ 'selector': 'app-server',

templateUrl: 'server.component',

serverID: number = 10;

serverStatus: string = 'online',

})

Component.html:

<p> server with ID ({{serverID}}) is {{serverStatus}} </p>

Component.html:

```
<button [disabled]='bool' style='margin-top: 20px'
```

```
> </button>
```

app.component.ts

```
import { Component } from '@angular/core';
```

```
@Component({
```

```
  selector: 'app-root',
```

```
  templateUrl: './app.component.html',
```

```
  styleUrls: ['./app.component.css']
```

3)

```
export class AppComponent {
```

```
  bool: 'true';
```

```
}
```

OUTPUT :

First Angular app

Welcome to the first angular app
server with 1010 is online

Server 2 is also working fine

jQuery Button
